ABSTRACT

A cigar tobacco paper and a method for packaging the same is provided. The cigar tobacco paper is packaged with an enwrapping means to hold a cylindrical shape. The cigar tobacco paper is rolled in combination with an enwrapping means and a cylindrical object such that the enwrapping means envelops the tobacco paper. The tobacco paper and enwrapping means are wrapped around the cylindrical object until fully rolled. The cylindrical object is removed leaving only a plurality of layers of both the cigar tobacco paper and the enwrapping means. The rolling of the tobacco paper and the enwrapping means allows for the tobacco paper to keep a cylindrical shape until delivered and used by a consumer. The enwrapping means may maintain the moisture and the flavor of the cigar tobacco paper prior to delivery to a consumer.
